PS Claim 1; Page 68-71; 84pp; Japanese.
XX
CC This invention describes a novel protein with peptidase activity
CC against brain beta-amyloid precursor protein which has been isolated from
CC human hippocampus and which has cerebroprotective, antialzheimers,
CC nootropic, neuroprotective and hemostatic activity and which can be used
CC as a vaccine or for gene therapy. The protein, and compounds identified
CC by screening as promoters or inhibitors of its activity, are used to
CC regulate beta-amyloid accumulation in the brain and treat or prevent
CC diseases in which this occurs, such as Alzheimer's, senile dementia,
CC inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   New isolated human protease proteins, useful for developing therapeutic
PT   or diagnostic compositions, particularly for developing human
PT   therapeutic agents that modulate protease activity in cells or tissues
PT   -
XX
PS   Claim 1; Page -; 80pp; English.
XX
CC   The invention discloses an isolated human protease peptide, its allelic
CC   variant or orthologue. The proper functioning of the cell requires
CC   careful control of the levels of important structural proteins, enzymes
CC   and regulatory proteins. One of the ways the cell reduces the steady
CC   state level of a particular protein is by proteolytic degradation.
CC   Proteolysis can also be used to convert a pre or pro-protein in to an
CC   active form. Proteases also regulate many different cell proliferation,
CC   differentiation and signalling processes. The peptides and nucleic acid
CC   molecules are useful in the development of human therapeutics (gene and
CC   protein therapy) and diagnostic compositions. The peptides are also
CC   useful for raising antibodies or eliciting an immune response (vaccine),
CC   as a reagent (including the labeled reagent) in assays designed to
CC   quantitatively determine levels of the protein (or its binding partner or
CC   ligand) in biological fluids, or as markers for tissues in which the
CC   corresponding protein is preferentially expressed and in methods for
CC   identifying a modulator of the peptide or an agent that binds to the
CC   peptide. The agents identified are useful for treating protease-related
CC   conditions that are specific for the subfamily of proteases that the
CC   peptide belongs to, particularly in cells and tissues that express the
CC   protease, such as inflammation, cancer, arteriosclerosis and degenerative
CC   disorders. The modulator of the peptide is also useful for treating a
CC   disorder characterised by an absence of, inappropriate or unwanted
CC   expression of the protein. The sequence presented is the human protease
CC   protein, variant #2, the gene for which is located on chromosome 13.
CC   Note: This sequence is not shown in the specification but has been
CC   created by the indexer from information given in figure 3.

XX
PT New isolated human protease proteins, useful for developing therapeutic
PT or diagnostic compositions, particularly for developing human
PT therapeutic agents that modulate protease activity in cells or tissues
PT -
XX
PS Claim 1; Fig 2; 80pp; English.
XX
CC The invention discloses an isolated human protease peptide, its allelic
CC variant or orthologue. The proper functioning of the cell requires
CC careful control of the levels of important structural proteins, enzymes
CC and regulatory proteins. One of the ways the cell reduces the steady
CC state level of a particular protein is by proteolytic degradation.
CC Proteolysis can also be used to convert a pre or pro-protein in to an
CC active form. Proteases also regulate many different cell proliferation,
CC differentiation and signalling processes. The peptides and nucleic acid
CC molecules are useful in the development of human therapeutics (gene and
CC protein therapy) and diagnostic compositions. The peptides are also
CC useful for raising antibodies or eliciting an immune response (vaccine),
CC as a reagent (including the labeled reagent) in assays designed to
CC quantitatively determine levels of the protein (or its binding partner or
CC ligand) in biological fluids, or as markers for tissues in which the
CC corresponding protein is preferentially expressed and in methods for
CC identifying a modulator of the peptide or an agent that binds to the
CC peptide. The agents identified are useful for treating protease-related
CC conditions that are specific for the subfamily of proteases that the
CC peptide belongs to, particularly in cells and tissues that express the
CC protease, such as inflammation, cancer, arteriosclerosis and degenerative
CC disorders. The modulator of the peptide is also useful for treating a
CC disorder characterised by an absence of, inappropriate or unwanted
CC expression of the protein. The sequence presented is the human protease
CC protein, variant #1, the gene for which is located on chromosome 13.

PT   Antibody to human plasma carboxy:peptidase B - useful for detecting
PT   and purifying hPCPB for use in treating clotting disorders e.g.
PT   haemophilia A
XX
PS   Disclosure; Figure 4; 40pp; English.
XX
CC   An antibody which specifically binds human plasma carboxypeptidase B
CC   (hPCPB) and does not cross react with other carboxypeptidases is
CC   useful for the detection of hPCPB in vitro.  The antibody is also
CC   used for purifying hPCPB from a sample.  Purification comprises
CC   passing a sample thought to contain hPCPB over either a column to
CC   which antibody has been bound, or a plasminogen affinity column,
CC   eluting the column and then recovering the fraction containing the
CC   hPCPB.

CC This sequence represents human plasma carboxypeptidase B (PCPB) which
CC has a molecular weight under non-reducing SDS-PAGE of approx. 60 kD.
CC PCPB may be used therapeutically in haemostatic regulation. PCPB is
CC purified from human plasma or by transformed cell culture by
CC extraction using plasminogen bound to a solid phase.
CC (Updated on 25-MAR-2003 to correct PF field.)

PT humans
XX
PS Disclosure; Page 25-26; 35pp; English.
XX
CC This sequence is the human plasma carboxypeptidase B (PCPB) mutant
CC hPCPBthr147. The invention relates to a method for determining the
CC presence of DNA or protein polymorphisms of PCPB in human subjects, which
CC comprises obtaining a prepared tissue or blood sample and determining the
CC presence of DNA coding for naturally occurring polymorphs of the protein
CC containing Alanine or Threonine at position 147 (PCPB1 and PCPB2
CC respectively). Determination of the relative distribution of the PCPB
CC polymorphs in a patient's blood by genetic or protein analysis by the
CC methods is useful to determine the risk of thrombotic disease in humans.
CC Such assessments may be made by accumulating information concerning the
CC relative distribution of the different polymorphs within the general
CC population compared with populations known to be at risk and establishing
CC a PCPB polymorph profile for at-risk patients.

PT   New human plasma carboxypeptidase B - used as haemostatic
PT   regulator for clotting blood, partic. for treating blood clotting
PT   disorders, e.g. haemophilia
XX
PS   Claim 2; Fig 4; 40pp; English.
XX
CC   This amino acid sequence was deduced from a clone isolated from a
CC   human liver cDNA library. There is about 40% sequence identity
CC   between the deduced preproPCPB amino acid sequence and pro-human
CC   mast cell carboxypeptidase A and between preproPCPB and prepro-rat
CC   carboxypeptidase B. Human PCPB has the same substrate binding sites
CC   as, and shares 6 cysteine residues which form 3 intramolecular
CC   disulphide bonds with, bovine and rat carboxypeptidase B. The
CC   presence of the same amino acid (Asp at position 348 of the mature
CC   protein) at the region in carboxypeptidases that determines
CC   substrate specificity, suggests that PCPB represents a plasma-
CC   derived carboxypeptidase. PCPB inhibits the enzymatic conversion by
CC   tPA of plasminogen to plasmin in the presence of fibrinogen.

PT   Human brain carboxypeptidase B isolated from the hippocampus useful for
PT   screening agents for the treatment of Alzheimer's and other brain
PT   disorders -
XX
PS   Disclosure; Page 71-73; 84pp; Japanese.
XX
CC   This invention describes a novel protein with peptidase activity
CC   against brain beta-amyloid precursor protein which has been isolated from
CC   human hippocampus and which has cerebroprotective, antialzheimers,
CC   nootropic, neuroprotective and hemostatic activity and which can be used
CC   as a vaccine or for gene therapy. The protein, and compounds identified
CC   by screening as promoters or inhibitors of its activity, are used to
CC   regulate beta-amyloid accumulation in the brain and treat or prevent
CC   diseases in which this occurs, such as Alzheimer's, senile dementia,
CC   inherited cerebral hemorrhage, Down's syndrome, and head trauma.

XX
CC   Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC   associated proteins represented in AAB58106 - AAB58548. Lung cancer
CC   associated proteins and polynucleotide sequences, their agonists, and
CC   antagonists may have neuroprotective; cytostatic; cardioactive;
CC   immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC   general; nephrotropic; antiinfective; gynecological; or antibacterial
CC   activity. The invention also includes antibodies specific for the
CC   protein or polynucleotide sequences. The lung cancer associated
CC   polynucleotide sequences may be used for detection of lung cancer,
CC   chromosome identification, as chromosome markers, and for numerous other
CC   diagnostic or research purposes. The proteins may be used to treat
CC   disorders such as neural, immune, muscular, reproductive,
CC   gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
CC   disorders. The proteins may also be used in the treatment of wounds and
CC   infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and
CC   peptide AAB58549 are used in the course of the invention for the
CC   identification and characterisation of the polynucleotide and protein
CC   sequences.

PT   New polynucleotide encoding a zinc carboxypeptidase B-like protein
PT   polypeptide, useful for treating diseases associated with
PT   carboxypeptidase dysfunction, e.g. cancer, CNS disorder, COPD or
PT   haematological disorder  -
XX
PS   Disclosure; Fig 3; 113pp; English.
XX
CC   The present sequence represents a zinc carboxypeptidase B precursor.
CC   The specification describes a human zinc carboxypeptidase B-like
CC   protein. The zinc carboxypeptidase B-like protein is used for treating
CC   diseases, such as cancer, a CNS disorder, chronic obstructive pulmonary
CC   disease (COPD) or haematological disorders. The zinc carboxypeptidase
CC   B-like protein may also be used to identify compounds which may act
CC   as activators or inhibitors at the enzyme's active site, to raise
CC   specific antibodies which can block the enzyme and effectively reduce
CC   its activity, as a bait protein in a two-hybrid or three-hybrid assay
CC   to identify other proteins which bind to or interact with the human
CC   zinc carboxypeptidase-like protein polypeptide and modulate its
CC   activity, and for immunization of mammals.

PT moiety linked to mutated enzyme which can transform an
PT anti:neoplastic prodrug
XX
PS Reference Example 14; Page 131-132; 182pp; English.
XX
CC A two-component system for anti-tumour therapy comprises a targeting
CC moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC prodrug. The system is based on antibody directed enzyme prodrug therapy
CC (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC be used. The present sequence is that of the native prepro-HCPB.

PT   New modified pro-domain of carboxy-peptidase B - enhances expression
PT   of co-expressed proteins for production of recombinant
PT   carboxy-peptidase or its fusions with antibodies, used, e.g. in
PT   enzyme prodrug therapy
XX
PS   Example 1; Page 54-55; 83pp; English.
XX
CC   The human pancreatic carboxypeptidase B (CPB) can be co-expressed with a
CC   modified pro-domain of CPB on a separate gene to enhance recombinant
CC   expression.  This process can be used to produce recombinant CPB in
CC   eukaryotic cells, or fusions of CPB with antibody chains.  CPB is used in
CC   insulin production and protein sequencing, while its fusions with
CC   antibodies are useful in antibody-directed enzyme prodrug therapy.  The
CC   modified pro-domain provide increased yields of recombinant CPB, possibly
CC   by protecting the C-terminus against enzymatic degradation or by
CC   increasing intracellular trafficking.

PT   Diagnosing breast cancer comprises determining expression of nucleic
PT   acid molecules or expression products that are differentially expressed
PT   in normal and malignant tissue -
XX
PS   Claim 37; Page 134-135; 219pp; English.
XX
CC   The present invention relates to a method for diagnosing breast cancer
CC   in a subject suspected of having endometrial cancer. The method
CC   comprises determining the expression of a set of human genes or
CC   expression products in an endometrial sample suspected of being
CC   cancerous. The human genes of the invention are differentially
CC   expressed in breast tumours characterised as high or low MAI (mitotic
CC   activity index). These sets of genes can be used to discriminate between
CC   high and low MAI breast tumours. The invention also provides DNA and
CC   protein microarrays for analysing the expression of the human genes and
CC   their protein products. The methods and arrays are useful for the
CC   diagnosis and prognosis of endometrial cancer, selecting and monitoring
CC   treatment regimes, and identification of compounds useful for the
CC   treatment of endometrial cancer. AAU84311-AAU84361 represent the human
CC   proteins of the invention that are differentially expressed in breast
CC   cancer tissue.

PT   Pharmaceutical kits for use in the treatment of prostate cancer,
PT   comprise anti-human seminal plasma protein single-chain antibody/human
PT   carboxypeptidase fusion protein and a prodrug of
PT   methotrexate-alpha-peptides -
XX
PS   Claim 3; Fig 4; 29pp; Chinese.
XX
CC   The invention relates to a pharmaceutical kit for antibody-directed
CC   enzyme prodrug therapy (ADEPT) to treat prostate cancer. The kit
CC   comprises several respective containers for holding anti-human seminal
CC   plasma protein single-chain antibody (ScFv)/human carboxypeptidase A
CC   (hCPA) fusion protein (ABP97414), a prodrug of methotrexate-alpha-peptide
CC   and a pharmaceutically-acceptable auxiliary for medication. The invention
CC   also encompasses the anti-human seminal plasma protein ScFv/hCPA fusion
CC   protein, and the nucleic acid encoding it (ABZ75116). This was
CC   constructed by linking DNA encoding the ScFv (itself generated by linking
CC   DNAs encoding the heavy and light chain variable regions (VH and VL) of
CC   the murine anti-human seminal plasma protein monoclonal antibody E4B7)
```

CC to DNA encoding human carboxypeptidase A via a linker. The ScFv portion
CC of the fusion protein enables it to be specifically targeted to prostate
CC cancer cells, where the hCPA portion can then activate the prodrug which
CC in turn has cytostatic activity towards the cancer cells. The invention
CC permits the fusion protein to be easily produced in large quantities for
CC use in ADEPT for prostate cancer treatment. The present sequence
CC represents the ScFv/hCPA fusion protein of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC   -!- CATALYTIC ACTIVITY: Similar to that of carboxypeptidase A
CC       (EC 3.4.17.1), but with a preference for bulkier C-terminal
CC       residues.
CC   -!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M14.

CC   -!- FUNCTION: Could be involved in the histone hyperacetylation
CC       pathway.
CC   -!- TISSUE SPECIFICITY: Fetal expression in the adrenal gland, brain,
CC       heart, intestine, kidney, liver and lung. Except for fetal brain
CC       that shows no imprinting, expression was found preferentially from
CC       the maternal allele.
CC   -!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M14.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

            Series: IRAL Plate: 16 Row: f Column: 21
            This clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 4503004.

PT Human brain carboxypeptidase B isolated from the hippocampus useful for
PT screening agents for the treatment of Alzheimer's and other brain
PT disorders -
XX
PS Claim 2b; Page 64-68; 84pp; Japanese.
XX
CC This invention describes a novel protein with peptidase activity
CC against brain beta-amyloid precursor protein which has been isolated from
CC human hippocampus and which has cerebroprotective, antialzheimers,
CC nootropic, neuroprotective and hemostatic activity and which can be used
CC as a vaccine or for gene therapy. The protein, and compounds identified
CC by screening as promoters or inhibitors of its activity, are used to
CC regulate beta-amyloid accumulation in the brain and treat or prevent
CC diseases in which this occurs, such as Alzheimer's, senile dementia,
CC inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   New isolated human protease proteins, useful for developing therapeutic
PT   or diagnostic compositions, particularly for developing human
PT   therapeutic agents that modulate protease activity in cells or tissues
PT   -
XX
PS   Claim 4; Fig 1; 80pp; English.
XX
CC   The invention discloses an isolated human protease peptide, its allelic
CC   variant or orthologue. The proper functioning of the cell requires
CC   careful control of the levels of important structural proteins, enzymes
CC   and regulatory proteins. One of the ways the cell reduces the steady
CC   state level of a particular protein is by proteolytic degradation.
CC   Proteolysis can also be used to convert a pre or pro-protein in to an
CC   active form. Proteases also regulate many different cell proliferation,
CC   differentiation and signalling processes. The peptides and nucleic acid
CC   molecules are useful in the development of human therapeutics (gene and
CC   protein therapy) and diagnostic compositions. The peptides are also
CC   useful for raising antibodies or eliciting an immune response (vaccine),
CC   as a reagent (including the labeled reagent) in assays designed to
CC   quantitatively determine levels of the protein (or its binding partner or
CC   ligand) in biological fluids, or as markers for tissues in which the
CC   corresponding protein is preferentially expressed and in methods for
CC   identifying a modulator of the peptide or an agent that binds to the
CC   peptide. The agents identified are useful for treating protease-related
CC   conditions that are specific for the subfamily of proteases that the
CC   peptide belongs to, particularly in cells and tissues that express the
CC   protease, such as inflammation, cancer, arteriosclerosis and degenerative
CC   disorders. The modulator of the peptide is also useful for treating a
CC   disorder characterised by an absence of, inappropriate or unwanted
CC   expression of the protein. The sequence presented is the human protease
CC   cDNA, the gene for which is located on chromosome 13.

PT   Diagnosing and detecting the progression of liver cancer,
PT   hepatocellular carcinoma or metastatic liver tumor in a patient,
PT   involves detecting the level of expression of two or more genes in a
PT   liver tissue sample  -
XX
PS   Claim 1; SEQ ID NO 2397; 298pp; English.
XX
CC   The invention relates to a novel method for diagnosing and detecting the
CC   progression of liver cancer, hepatocellular carcinoma or metastatic liver
CC   tumour in a patient, and differentiating metastatic liver cancer from
CC   hepatocellular carcinoma in a patient, involving detecting the level of
CC   expression of two or more genes represented in ABN93503-ABN97455 in a
CC   tissue sample. The method of the invention has hepatotropic, and
CC   cytostatic activity. The method is useful for diagnosing and detecting
CC   the progression of liver cancer, hepatocellular carcinoma and metastatic
CC   liver carcinoma in a patient. The method is useful for identifying
CC   expression profiles which serve as useful diagnostic markers as well as
CC   markers that can be used to monitor disease states, disease progression,
CC   drug toxicity, drug efficacy and drug metabolism.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   Antibody to human plasma carboxy:peptidase B - useful for detecting
PT   and purifying hPCPB for use in treating clotting disorders e.g.
PT   haemophilia A
XX
PS   Disclosure; Figure 4; 40pp; English.
XX
CC   An antibody which specifically binds human plasma carboxypeptidase B
CC   (hPCPB) and does not cross react with other carboxypeptidases is
CC   useful for the detection of hPCPB in vitro.  The antibody is also
CC   used for purifying hPCPB from a sample.  Purification comprises
CC   passing a sample thought to contain hPCPB over either a column to
CC   which antibody has been bound, or a plasminogen affinity column,
CC   eluting the column and then recovering the fraction containing the
CC   hPCPB.

PT   Using human plasma carboxy:peptidase B in blood coagulation - is
PT   functionally related to carboxy:peptidase A and pancreas
PT   carboxy:peptidase B
XX
PS   Example 2; Column 37-42; 39pp; English.
XX
CC   This sequence encodes human plasma carboxypeptidase B (PCPB) which
CC   has a molecular weight under non-reducing SDS-PAGE of approx. 60 kD.
CC   PCPB may be used therapeutically in haemostatic regulation.  PCPB is
CC   purified from human plasma or by transformed cell culture by
CC   extraction using plasminogen bound to a solid phase.
CC   (Updated on 25-MAR-2003 to correct PF field.)

PT   New human plasma carboxypeptidase B - used as haemostatic
PT   regulator for clotting blood, partic. for treating blood clotting
PT   disorders, e.g. haemophilia
XX
PS   Disclosure; Fig 4; 40pp; English.
XX
CC   Human plasma carboxypeptidase B was isolated from human plasma and
CC   partially sequenced. Oligonucleotide primers were designed based on
CC   the partial amino acid sequences. The primers were used in a PCR
CC   amplification to identify cDNA encoding PCPB from a human liver cDNA
CC   library. The PCR product was capable of encoding the first 37 amino
CC   acids of PCPB; a 46mer probe was used to obtain the full-length
CC   sequence which, although disclosed in the specification, is not
CC   claimed. PCPB inhibits the enzymatic conversion by tPA of
CC   plasminogen to plasmin in the presence of fibrinogen.

PT Detecting new polymorphism of human plasma carboxypeptidase B -
PT comprises Alanine or Threonine at position 147 of protein by DNA or
PT protein analysis, useful to detect risk of thrombotic disease in
PT humans
XX
PS Example 1; Page 24; 35pp; English.
XX
CC This sequence encodes the human plasma carboxypeptidase B (PCPB) mutant
CC hPCPBthr147. The invention relates to a method for determining the
CC presence of DNA or protein polymorphisms of PCPB in human subjects, which
CC comprises obtaining a prepared tissue or blood sample and determining the
CC presence of DNA coding for naturally occurring polymorphs of the protein
CC containing Alanine or Threonine at position 147 (PCPB1 and PCPB2
CC respectively). Determination of the relative distribution of the PCPB
CC polymorphs in a patient's blood by genetic or protein analysis by the
CC methods is useful to determine the risk of thrombotic disease in humans.
CC Such assessments may be made by accumulating information concerning the
CC relative distribution of the different polymorphs within the general
CC population compared with populations known to be at risk and establishing
CC a PCPB polymorph profile for at-risk patients.

PT Lung cancer associated gene sequences, referred to as lung cancer
PT antigens, useful for treatment, prevention, and diagnosis of disorders
PT such as lung cancer -
XX
PS Claim 1; Page 507; 1425pp; English.
XX
CC Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC associated proteins represented in AAB58106 - AAB58548. Lung cancer
CC associated proteins and polynucleotide sequences, their agonists, and
CC antagonists may have neuroprotective; cytostatic; cardioactive;
CC immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC general; nephrotropic; antiinfective; gynecological; or antibacterial
CC activity. The invention also includes antibodies specific for the
CC protein or polynucleotide sequences. The lung cancer associated
CC polynucleotide sequences may be used for detection of lung cancer,
CC chromosome identification, as chromosome markers, and for numerous other
CC diagnostic or research purposes. The proteins may be used to treat
CC disorders such as neural, immune, muscular, reproductive,
CC gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
CC disorders. The proteins may also be used in the treatment of wounds and
CC infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and
CC peptide AAB58549 are used in the course of the invention for the
CC identification and characterisation of the polynucleotide and protein
CC sequences.

PT New nucleic acid associated with lactation, and muscle and fat
PT deposition, useful for genome mapping, gene identification and
PT analysis, cattle breeding, or for genetically improving cattle -
XX
PS Claim 2; SEQ ID No 14595; 245pp; English.
XX
CC The invention relates to a purified nucleic acid molecule associated with
CC lactation or muscle and fat deposition (designated LMFD), derived
CC from cattle, and the LMFD nucleic acid can specifically hybridise to a
CC second nucleic acid molecule comprising any of 15112 nucleotide
CC sequences, appearing as ABX34836-ABX49947, or complements of them.
CC Also included are; (1) a transformed cell having a nucleic acid
CC comprising an LMFD nucleic acid linked to a promoter and a 3' non-
CC translated sequence that functions in the cell to cause termination of
CC transcription and addition of polyadenylated ribonucleotides to a 3' end
CC of the mRNA molecule; and (2) determining a level or pattern of a
CC molecule in a bovine cell or tissue comprising: (a) incubating a marker
CC nucleic acid (comprising any of the 15112 nucleic acid sequences or its
CC complement or fragment) with a complementary nucleic acid molecule
CC obtained from the bovine cell or tissue, where hybridisation between the
CC marker nucleic acid and the complementary nucleic acid permits the
CC detection of the molecule; and (b) detecting the level or pattern of the
CC complementary nucleic acid, where the detection of the complementary
CC nucleic acid is predictive of the level or pattern of the molecule.
CC The LMFD nucleic acid is used for determining a level or pattern
CC of a molecule in a bovine cell or tissue. It is useful for genome
CC mapping, gene identification and analysis, cattle breeding, preparation
CC of constructs for use in cattle gene expression, or for genetically
CC improving cattle. The present sequence is one of the 15112 bovine
CC LMFD EST (expressed sequence tag) nucleic acids.
CC Note: The present sequence was not shown in the specification but
CC was obtained in electronic format from the USPTO web site:
CC seqdata.uspto.gov/sequence.html?DocID=20020137139.

CC This invention describes novel human nucleic acid segments (I)
CC containing polymorphic sites. The polynucleotides of (I) are used for,
CC e.g. correlating disease polymorphisms (or disease susceptibility) or
CC other phenotypic traits (e.g. baldness, obesity, fertility, strength,
CC response to drugs etc.); diagnosing and monitoring e.g. cancer,
CC inflammation, heart or central nervous system diseases; detecting
CC susceptibility to microbial infection; treating or preventing such
CC diseases; forensic analysis; gene therapy; paternity testing; mapping
CC genomic loci associated with phenotypic traits (and subsequent cloning
CC of the genes responsible); and the production of transgenic organisms.
CC Antibodies raised against (I) are useful as diagnostic and therapeutic
CC tools and in drug screening. AAH85144 - AAH87644 represent the human
CC DNA sequences containing biallelic polymorphic sites described in the
CC invention.

XX
PS   Claim 2; SEQ ID No 8425; 245pp; English.
XX
```

```
CC   The invention relates to a purified nucleic acid molecule associated with
CC   lactation or muscle and fat deposition (designated LMFD), derived
CC   from cattle, and the LMFD nucleic acid can specifically hybridise to a
CC   second nucleic acid molecule comprising any of 15112 nucleotide
CC   sequences, appearing as ABX34836-ABX49947, or complements of them.
CC   Also included are; (1) a transformed cell having a nucleic acid
CC   comprising an LMFD nucleic acid linked to a promoter and a 3' non-
CC   translated sequence that functions in the cell to cause termination of
CC   transcription and addition of polyadenylated ribonucleotides to a 3' end
CC   of the mRNA molecule; and (2) determining a level or pattern of a
CC   molecule in a bovine cell or tissue comprising: (a) incubating a marker
CC   nucleic acid (comprising any of the 15112 nucleic acid sequences or its
CC   complement or fragment) with a complementary nucleic acid molecule
CC   obtained from the bovine cell or tissue, where hybridisation between the
CC   marker nucleic acid and the complementary nucleic acid permits the
CC   detection of the molecule; and (b) detecting the level or pattern of the
CC   complementary nucleic acid, where the detection of the complementary
CC   nucleic acid is predictive of the level or pattern of the molecule.
CC   The LMFD nucleic acid is used for determining a level or pattern
CC   of a molecule in a bovine cell or tissue. It is useful for genome
CC   mapping, gene identification and analysis, cattle breeding, preparation
CC   of constructs for use in cattle gene expression, or for genetically
CC   improving cattle. The present sequence is one of the 15112 bovine
CC   LMFD EST (expressed sequence tag) nucleic acids.
CC   Note: The present sequence was not shown in the specification but
CC   was obtained in electronic format from the USPTO web site:
CC   seqdata.uspto.gov/sequence.html?DocID=20020137139.

PT   New isolated nucleic acid segments from the human genome - used for
PT   determining polymorphic forms for use in e.g. forensics, paternity
PT   testing or phenotypic typing for disease
XX
PS   Claim 1; Page 152; 310pp; English.
XX
CC   AAX10269-X12937 are human DNA fragments which contain biallelic
CC   polymorphic markers which have been isolated using the primers
CC   represented in AAX09121-X10268. The base occupying the polymorphic site
CC   is indicated by the appropriate IUPAC-IUB ambiguity code. These fragments
CC   can be used in methods for determining polymorphic forms in an individual
CC   for use in e.g. forensics, paternity testing or for phenotypic typing for
CC   diseases such as agammaglobulinemia, diabetes insipidus, Lesch-Nyhan
CC   syndrome, muscular dystrophy, Wiskott-Aldrich syndrome, Fabry's disease,
CC   familial hypercholesterolemia, polycystic kidney disease, hereditary
CC   spherocytosis, von Willebrand's disease, tuberous sclerosis, hereditary
CC   haemorrhagic telangiectasia, familial colonic polyposis, Ehlers-Danlos
CC   syndrome, osteogenesis imperfecta, acute intermittent porphyria,
CC   autoimmune diseases, inflammation, cancer, diseases of the nervous
CC   system, infection by pathogenic microorganisms, and characteristics such
CC   as longevity, appearance (e.g. baldness, obesity), strength, speed,
CC   endurance, fertility, and susceptibility or receptivity to particular
CC   drugs or therapeutic treatments. The isolated polymorphic nucleic acid
CC   segments can also be used to produce medicaments for the treatment or
CC   prophylaxis of such diseases.

PT Novel human polypeptides and polynucleotides useful for diagnosing,
PT preventing and treating cardiovascular disease, neurodegenerative,
PT hyperproliferative disorders and autoimmune disorders -
XX
PS Disclosure; SEQ ID 6743; 1037pp; English.
XX
CC The present invention describes substantially purified human proteins
CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1
CC in the specification). ABN15762 to ABN27252 encode the human ORFX
CC proteins given in ABP00010 to ABP11500. ORFX proteins are useful for
CC treating or preventing a pathology associated with an ORFX-associated
CC disorder in humans, and in the manufacture of a medicament for treating a
CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide
CC sequences can be used in gene therapy. ORFX sequences can be used in the
CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver,
CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,
CC osteoarthritis, neurodegenerative disorders, disorders related to organ
CC transplantation, cardiovascular diseases, diabetes mellitus, systemic
CC lupus erythematosus, hypertension, hypothyroidism, cholesterol ester
CC storage disease, various immune deficiencies and disorders, infectious
CC diseases, autoimmune disorders such as multiple sclerosis, rheumatoid
CC arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host
CC disease and autoimmune inflammatory eye disease. ORFX proteins are also
CC useful for treating burns, incisions, ulcers, for treating osteoporosis,
CC bone degenerative disorders, or periodontal disease, and for gut
CC protection or regeneration and treatment of lung or liver fibrosis,
CC reperfusion injury in various tissues and conditions resulting from
CC systemic cytokine damage.
CC N.B. The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT Please visit our web site (http://genome.gsc.riken.go.jp/) for further details.
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGAGCGGCCGCAACTCGAGTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence[5' GAGAGAGAGAAGGATCCAAGAGCTCAATTAATTTAATTAAACCCCCCCCCCC 3']. cDNA was cleaved with XhoI and SstI. Cloning sites, 5' end: SstI; 3' end: XhoI. Host: SOLR.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Human brain carboxypeptidase B isolated from the hippocampus useful for
PT screening agents for the treatment of Alzheimer's and other brain
PT disorders -
XX
PS Claim 1; Page 68-71; 84pp; Japanese.
XX
CC This invention describes a novel protein with peptidase activity
CC against brain beta-amyloid precursor protein which has been isolated from
CC human hippocampus and which has cerebroprotective, antialzheimers,
CC nootropic, neuroprotective and hemostatic activity and which can be used
CC as a vaccine or for gene therapy. The protein, and compounds identified
CC by screening as promoters or inhibitors of its activity, are used to
CC regulate beta-amyloid accumulation in the brain and treat or prevent
CC diseases in which this occurs, such as Alzheimer's, senile dementia,
CC inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   New isolated human protease proteins, useful for developing therapeutic
PT   or diagnostic compositions, particularly for developing human
PT   therapeutic agents that modulate protease activity in cells or tissues
PT   -
XX
PS   Claim 1; Page -; 80pp; English.
XX
CC   The invention discloses an isolated human protease peptide, its allelic
CC   variant or orthologue. The proper functioning of the cell requires
CC   careful control of the levels of important structural proteins, enzymes
CC   and regulatory proteins. One of the ways the cell reduces the steady
CC   state level of a particular protein is by proteolytic degradation.
CC   Proteolysis can also be used to convert a pre or pro-protein in to an
CC   active form. Proteases also regulate many different cell proliferation,
CC   differentiation and signalling processes. The peptides and nucleic acid
CC   molecules are useful in the development of human therapeutics (gene and
CC   protein therapy) and diagnostic compositions. The peptides are also
CC   useful for raising antibodies or eliciting an immune response (vaccine),
CC   as a reagent (including the labeled reagent) in assays designed to
CC   quantitatively determine levels of the protein (or its binding partner or
CC   ligand) in biological fluids, or as markers for tissues in which the
CC   corresponding protein is preferentially expressed and in methods for
CC   identifying a modulator of the peptide or an agent that binds to the
CC   peptide. The agents identified are useful for treating protease-related
CC   conditions that are specific for the subfamily of proteases that the
CC   peptide belongs to, particularly in cells and tissues that express the
CC   protease, such as inflammation, cancer, arteriosclerosis and degenerative
CC   disorders. The modulator of the peptide is also useful for treating a
CC   disorder characterised by an absence of, inappropriate or unwanted
CC   expression of the protein. The sequence presented is the human protease
CC   protein, variant #2, the gene for which is located on chromosome 13.
CC   Note: This sequence is not shown in the specification but has been
CC   created by the indexer from information given in figure 3.

PT   Antibody to human plasma carboxy:peptidase B - useful for detecting
PT   and purifying hPCPB for use in treating clotting disorders e.g.
PT   haemophilia A
XX
PS   Disclosure; Figure 4; 40pp; English.
XX
CC   An antibody which specifically binds human plasma carboxypeptidase B
CC   (hPCPB) and does not cross react with other carboxypeptidases is
CC   useful for the detection of hPCPB in vitro.  The antibody is also
CC   used for purifying hPCPB from a sample.  Purification comprises
CC   passing a sample thought to contain hPCPB over either a column to
CC   which antibody has been bound, or a plasminogen affinity column,
CC   eluting the column and then recovering the fraction containing the
CC   hPCPB.

PT   Using human plasma carboxy:peptidase B in blood coagulation - is
PT   functionally related to carboxy:peptidase A and pancreas
PT   carboxy:peptidase B
XX
PS   Example 2; Column 37-42; 39pp; English.
XX
CC   This sequence represents human plasma carboxypeptidase B (PCPB) which
CC   has a molecular weight under non-reducing SDS-PAGE of approx. 60 kD.
CC   PCPB may be used therapeutically in haemostatic regulation.  PCPB is
CC   purified from human plasma or by transformed cell culture by
CC   extraction using plasminogen bound to a solid phase.

PT   Detecting new polymorphism of human plasma carboxypeptidase B -
PT   comprises Alanine or Threonine at position 147 of protein by DNA or
PT   protein analysis, useful to detect risk of thrombotic disease in
PT   humans
XX
PS   Disclosure; Page 25-26; 35pp; English.
XX
CC   This sequence is the human plasma carboxypeptidase B (PCPB) mutant
CC   hPCPBthr147. The invention relates to a method for determining the
CC   presence of DNA or protein polymorphisms of PCPB in human subjects, which
CC   comprises obtaining a prepared tissue or blood sample and determining the
CC   presence of DNA coding for naturally occurring polymorphs of the protein
CC   containing Alanine or Threonine at position 147 (PCPB1 and PCPB2
CC   respectively). Determination of the relative distribution of the PCPB
CC   polymorphs in a patient's blood by genetic or protein analysis by the
CC   methods is useful to determine the risk of thrombotic disease in humans.
CC   Such assessments may be made by accumulating information concerning the
CC   relative distribution of the different polymorphs within the general
CC   population compared with populations known to be at risk and establishing
CC   a PCPB polymorph profile for at-risk patients.

PT   New human plasma carboxypeptidase B - used as haemostatic
PT   regulator for clotting blood, partic. for treating blood clotting
PT   disorders, e.g. haemophilia
XX
PS   Claim 2; Fig 4; 40pp; English.
XX
CC   This amino acid sequence was deduced from a clone isolated from a
CC   human liver cDNA library. There is about 40% sequence identity
CC   between the deduced preproPCPB amino acid sequence and pro-human
CC   mast cell carboxypeptidase A and between preproPCPB and prepro-rat
CC   carboxypeptidase B. Human PCPB has the same substrate binding sites
CC   as, and shares 6 cysteine residues which form 3 intramolecular
CC   disulphide bonds with, bovine and rat carboxypeptidase B. The
CC   presence of the same amino acid (Asp at position 348 of the mature
```

```
CC   protein) at the region in carboxypeptidases that determines
CC   substrate specificity, suggests that PCPB represents a plasma-
CC   derived carboxypeptidase. PCPB inhibits the enzymatic conversion by
CC   tPA of plasminogen to plasmin in the presence of fibrinogen.

XX
CC   This invention describes a novel protein with peptidase activity
CC   against brain beta-amyloid precursor protein which has been isolated from
CC   human hippocampus and which has cerebroprotective, antialzheimers,
CC   nootropic, neuroprotective and hemostatic activity and which can be used
CC   as a vaccine or for gene therapy. The protein, and compounds identified
CC   by screening as promoters or inhibitors of its activity, are used to
CC   regulate beta-amyloid accumulation in the brain and treat or prevent
```

```
CC   diseases in which this occurs, such as Alzheimer's, senile dementia,
CC   inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   Lung cancer associated gene sequences, referred to as lung cancer
PT   antigens, useful for treatment, prevention, and diagnosis of disorders
PT   such as lung cancer -
XX
PS   Claim 11; Page 944-945; 1425pp; English.
XX
CC   Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC   associated proteins represented in AAB58106 - AAB58548. Lung cancer
CC   associated proteins and polynucleotide sequences, their agonists, and
CC   antagonists may have neuroprotective; cytostatic; cardioactive;
CC   immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC   general; nephrotropic; antiinfective; gynecological; or antibacterial
CC   activity. The invention also includes antibodies specific for the
CC   protein or polynucleotide sequences. The lung cancer associated
CC   polynucleotide sequences may be used for detection of lung cancer,
CC   chromosome identification, as chromosome markers, and for numerous other
CC   diagnostic or research purposes. The proteins may be used to treat
CC   disorders such as neural, immune, muscular, reproductive,
CC   gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
CC   disorders. The proteins may also be used in the treatment of wounds and
CC   infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and
CC   peptide AAB58549 are used in the course of the invention for the
CC   identification and characterisation of the polynucleotide and protein
CC   sequences.

CC   The present sequence represents a zinc carboxypeptidase B precursor.
CC   The specification describes a human zinc carboxypeptidase B-like
CC   protein. The zinc carboxypeptidase B-like protein is used for treating
CC   diseases, such as cancer, a CNS disorder, chronic obstructive pulmonary
CC   disease (COPD) or haematological disorders. The zinc carboxypeptidase
CC   B-like protein may also be used to identify compounds which may act
CC   as activators or inhibitors at the enzyme's active site, to raise
CC   specific antibodies which can block the enzyme and effectively reduce
CC   its activity, as a bait protein in a two-hybrid or three-hybrid assay
CC   to identify other proteins which bind to or interact with the human
CC   zinc carboxypeptidase-like protein polypeptide and modulate its
CC   activity, and for immunization of mammals.

PT   DNA encoding porcine carboxy:peptidase B - used for transforming
PT   host cells, partic. Pichia species, for prodn. of the enzyme
XX
PS   Example 1; Page 16-17; 34pp; English.
XX
CC   The porcine carboxypeptidase B coding sequence can be place in a
CC   bacterial or pref. Pichia yeast expression vector. The expression
CC   vector further comprises the signal peptide of either human serum
CC   albumin (designated pLGD23 - NRRL B-21029); premating factor alpha
CC   (designated pFJ489 - NRRL B-21028); mating factor alpha (designated
CC   pFJ474 - NRRL B-21032) or the porcine proCBB signal peptide,
CC   (designated pLGD27 - NRRL B-21027).  The method can be used for
CC   producing large amounts of porcine carboxypeptidase B and when
CC   produced in Pichia yeast, the protein does not need solubilisation
CC   or folding.  The produced enzyme is then used for pref. cleaving
CC   basic residues from the carboxy terminus of proteins.

PT   moiety linked to mutated enzyme which can transform an
PT   anti:neoplastic prodrug
XX
PS   Reference Example 14; Page 131-132; 182pp; English.
XX
CC   A two-component system for anti-tumour therapy comprises a targeting
CC   moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC   prodrug. The system is based on antibody directed enzyme prodrug therapy
CC   (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC   pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC   Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC   be used. The present sequence is that of the native prepro-HCPB.

PT   New modified pro-domain of carboxy-peptidase B - enhances expression
PT   of co-expressed proteins for production of recombinant
PT   carboxy-peptidase or its fusions with antibodies, used, e.g. in
PT   enzyme prodrug therapy
XX
PS   Example 1; Page 54-55; 83pp; English.
XX
CC   The human pancreatic carboxypeptidase B (CPB) can be co-expressed with a
CC   modified pro-domain of CPB on a separate gene to enhance recombinant
CC   expression.  This process can be used to produce recombinant CPB in
CC   eukaryotic cells, or fusions of CPB with antibody chains.  CPB is used in
CC   insulin production and protein sequencing, while its fusions with
CC   antibodies are useful in antibody-directed enzyme prodrug therapy.  The
CC   modified pro-domain provide increased yields of recombinant CPB, possibly
CC   by protecting the C-terminus against enzymatic degradation or by
CC   increasing intracellular trafficking.

XX
PT   Novel metallocarboxy peptidase-like polypeptide is useful in treating
PT   neurodegenerative, immune, etc. disorders  -
XX
PS   Example 3; Fig 1; 146pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an amino
CC   acid sequence of 374, 41, 14, 15, 41, 22, 15, 27, 14, 9, 18, 20, 15,
CC   354, 165, 374, 354, or 41 amino acids, fully defined in the
CC   specification, or its translated protein coding portion, mature protein
CC   coding portion, extracellular portion or active domain. The polypeptide
CC   is a human secreted metallocarboxypeptidase-like polypeptide. It
CC   is useful for treating mammalian diseases including:
CC   neurodegenerative diseases such as Parkinson's or Alzheimer's diseases,
CC   osteoporosis, osteoarthritis, disorders linked to reduced tissue
CC   growth, Huntington's disease, amylotrophic lateral sclerosis, stroke,
CC   reperfusion, wound healing, infectious diseases, immune and autoimmune
CC   disorders such as severe combined immunodeficiency, rheumatoid
CC   arthritis, Guillain-Barre syndrome, insulin dependent diabetes
CC   mellitus, graft-versus-host disease and allergy, cancer, and
CC   haemophilia. The polypeptide is also useful in medical imaging, as an
CC   immunogen to generate antibodies, as a nutritional source or
CC   supplement, and as a contraceptive. The present sequence is
CC   a carboxypeptidase homologue protein of Bothops jararaca.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

;  APPLICANT: Copley, Clive G
;  APPLICANT:  Edge, Michael Derek
;  APPLICANT:  Emery, Stephen Charles
;  TITLE OF INVENTION: Monoclonal Antibody to CEA, Conjugates Comprising Said Antibody, a
;  TITLE OF INVENTION:  Their Therapeutic use in an Adept System
;  FILE REFERENCE: 1991-209
;  CURRENT APPLICATION NUMBER: US/09/910,059
;  CURRENT FILING DATE:  2001-07-23
;  PRIOR APPLICATION NUMBER: US 09/171,945
;  PRIOR FILING DATE: 1998-10-29
;  PRIOR APPLICATION NUMBER: PCT/GB97/01165
;  PRIOR FILING DATE: 1997-04-29
;  PRIOR APPLICATION NUMBER: GB 9703103.3
;  PRIOR FILING DATE: 1997-02-14
;  PRIOR APPLICATION NUMBER: GB9609405.7
;  PRIOR FILING DATE: 1996-05-04
;  NUMBER OF SEQ ID NOS: 131
;  SOFTWARE: PatentIn version 3.1
; SEQ ID NO 125
;   LENGTH: 716
;   TYPE: PRT
;   ORGANISM: Artificial Sequence
;   FEATURE:
;   OTHER INFORMATION: humanised pre-pro HCPB-linker-Fd sequence

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Database : SwissProt_41:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC   -!- CATALYTIC ACTIVITY: Peptidyl-L-amino acid + H(2)O = peptide + L-
CC       amino acid.
CC   -!- SUBCELLULAR LOCATION: Secretory granules.
CC   -!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M14.

CC   -!- CATALYTIC ACTIVITY: Similar to that of carboxypeptidase A
CC       (EC 3.4.17.1), but with a preference for bulkier C-terminal
CC       residues.
CC   -!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M14.
CC   ---------------------------------------------------------------------

CC   -!- FUNCTION: Could be involved in the histone hyperacetylation
CC       pathway.
CC   -!- TISSUE SPECIFICITY: Fetal expression in the adrenal gland, brain,
CC       heart, intestine, kidney, liver and lung. Except for fetal brain
CC       that shows no imprinting, expression was found preferentially from
CC       the maternal allele.
CC   -!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M14.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) BD Biosciences Clontech, 1020 East Meadow
            Circle, Palo Alto, CA 94303, USA
COMMENT     This CDS clone is a part of a collection of human full length
            expression clones generated by BD Biosciences Clontech and the
            Harvard Institute of Proteomics. Each CDS has been cloned in two
            forms: with and without stop-codon (to allow fusion with C-terminal
            tag). The CDS has been  directionally cloned using BD In-Fusion(TM)
            cloning system between the SalI  and HindIII sites of the pDNR-DUAL
            vector. Additional sequences in the clone:  'ACC' after SalI site
            and before 'ATG' to provide Kozak consensus sequence; 'GG' after
            last codon and before HindIII site to maintain reading frame.
            Clone distribution: http://bioinfo.clontech.com/orfclones.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) BD Biosciences Clontech, 1020 East Meadow
            Circle, Palo Alto, CA 94303, USA
COMMENT     This CDS clone is a part of a collection of human full length
            expression clones generated by BD Biosciences Clontech and the
            Harvard Institute of Proteomics. Each CDS has been cloned in two
            forms: with and without stop-codon (to allow fusion with C-terminal
            tag). The CDS has been directionally cloned using BD In-Fusion(TM)
            cloning system between the SalI and HindIII sites of the pDNR-DUAL
            vector. Additional sequences in the clone: 'ACC' after SalI site
            and before 'ATG' to provide Kozak consensus sequence; 'GG' after
            last codon and before HindIII site to maintain reading frame.
            Clone distribution: http://bioinfo.clontech.com/orfclones.

PT   Human brain carboxypeptidase B isolated from the hippocampus useful for
PT   screening agents for the treatment of Alzheimer's and other brain
PT   disorders -
XX
PS   Claim 2b; Page 64-68; 84pp; Japanese.
XX
CC   This invention describes a novel protein with peptidase activity
CC   against brain beta-amyloid precursor protein which has been isolated from
CC   human hippocampus and which has cerebroprotective, antialzheimers,
CC   nootropic, neuroprotective and hemostatic activity and which can be used
CC   as a vaccine or for gene therapy. The protein, and compounds identified
CC   by screening as promoters or inhibitors of its activity, are used to
CC   regulate beta-amyloid accumulation in the brain and treat or prevent
CC   diseases in which this occurs, such as Alzheimer's, senile dementia,
CC   inherited cerebral hemorrhage, Down's syndrome, and head trauma.

XX
PT   New isolated human protease proteins, useful for developing therapeutic
PT   or diagnostic compositions, particularly for developing human
PT   therapeutic agents that modulate protease activity in cells or tissues
PT   -
XX
PS   Claim 4; Fig 1; 80pp; English.
XX
CC   The invention discloses an isolated human protease peptide, its allelic
CC   variant or orthologue. The proper functioning of the cell requires
CC   careful control of the levels of important structural proteins, enzymes
CC   and regulatory proteins. One of the ways the cell reduces the steady
CC   state level of a particular protein is by proteolytic degradation.
CC   Proteolysis can also be used to convert a pre or pro-protein in to an
CC   active form. Proteases also regulate many different cell proliferation,
CC   differentiation and signalling processes. The peptides and nucleic acid
CC   molecules are useful in the development of human therapeutics (gene and
CC   protein therapy) and diagnostic compositions. The peptides are also
CC   useful for raising antibodies or eliciting an immune response (vaccine),
CC   as a reagent (including the labeled reagent) in assays designed to
CC   quantitatively determine levels of the protein (or its binding partner or
CC   ligand) in biological fluids, or as markers for tissues in which the
CC   corresponding protein is preferentially expressed and in methods for
CC   identifying a modulator of the peptide or an agent that binds to the
CC   peptide. The agents identified are useful for treating protease-related
CC   conditions that are specific for the subfamily of proteases that the
CC   peptide belongs to, particularly in cells and tissues that express the
CC   protease, such as inflammation, cancer, arteriosclerosis and degenerative
CC   disorders. The modulator of the peptide is also useful for treating a
CC   disorder characterised by an absence of, inappropriate or unwanted
CC   expression of the protein. The sequence presented is the human protease
CC   cDNA, the gene for which is located on chromosome 13.

PT   Detecting new polymorphism of human plasma carboxypeptidase B -
```

```
PT   comprises Alanine or Threonine at position 147 of protein by DNA or
PT   protein analysis, useful to detect risk of thrombotic disease in
PT   humans
XX
PS   Example 1; Page 24; 35pp; English.
XX
CC   This sequence encodes the human plasma carboxypeptidase B (PCPB) mutant
CC   hPCPBthr147. The invention relates to a method for determining the
CC   presence of DNA or protein polymorphisms of PCPB in human subjects, which
CC   comprises obtaining a prepared tissue or blood sample and determining the
CC   presence of DNA coding for naturally occurring polymorphs of the protein
CC   containing Alanine or Threonine at position 147 (PCPB1 and PCPB2
CC   respectively). Determination of the relative distribution of the PCPB
CC   polymorphs in a patient's blood by genetic or protein analysis by the
CC   methods is useful to determine the risk of thrombotic disease in humans.
CC   Such assessments may be made by accumulating information concerning the
CC   relative distribution of the different polymorphs within the general
CC   population compared with populations known to be at risk and establishing
CC   a PCPB polymorph profile for at-risk patients.

PT   Diagnosing and detecting the progression of liver cancer,
PT   hepatocellular carcinoma or metastatic liver tumor in a patient,
PT   involves detecting the level of expression of two or more genes in a
PT   liver tissue sample  -
XX
PS   Claim 1; SEQ ID NO 2397; 298pp; English.
XX
CC   The invention relates to a novel method for diagnosing and detecting the
CC   progression of liver cancer, hepatocellular carcinoma or metastatic liver
```

```
CC   tumour in a patient, and differentiating metastatic liver cancer from
CC   hepatocellular carcinoma in a patient, involving detecting the level of
CC   expression of two or more genes represented in ABN93503-ABN97455 in a
CC   tissue sample. The method of the invention has hepatotropic, and
CC   cytostatic activity. The method is useful for diagnosing and detecting
CC   the progression of liver cancer, hepatocellular carcinoma and metastatic
CC   liver carcinoma in a patient. The method is useful for identifying
CC   expression profiles which serve as useful diagnostic markers as well as
CC   markers that can be used to monitor disease states, disease progression,
CC   drug toxicity, drug efficacy and drug metabolism.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   Antibody to human plasma carboxy:peptidase B - useful for detecting
PT   and purifying hPCPB for use in treating clotting disorders e.g.
```

```
PT   haemophilia A
XX
PS   Disclosure; Figure 4; 40pp; English.
XX
CC   An antibody which specifically binds human plasma carboxypeptidase B
CC   (hPCPB) and does not cross react with other carboxypeptidases is
CC   useful for the detection of hPCPB in vitro.  The antibody is also
CC   used for purifying hPCPB from a sample.  Purification comprises
CC   passing a sample thought to contain hPCPB over either a column to
CC   which antibody has been bound, or a plasminogen affinity column,
CC   eluting the column and then recovering the fraction containing the
CC   hPCPB.

XX
PS   Example 2; Column 37-42; 39pp; English.
XX
CC   This sequence encodes human plasma carboxypeptidase B (PCPB) which
CC   has a molecular weight under non-reducing SDS-PAGE of approx. 60 kD.
CC   PCPB may be used therapeutically in haemostatic regulation.  PCPB is
CC   purified from human plasma or by transformed cell culture by
CC   extraction using plasminogen bound to a solid phase.

PT   New human plasma carboxypeptidase B - used as haemostatic
PT   regulator for clotting blood, partic. for treating blood clotting
PT   disorders, e.g. haemophilia
XX
```

```
PS   Disclosure; Fig 4; 40pp; English.
XX
CC   Human plasma carboxypeptidase B was isolated from human plasma and
CC   partially sequenced. Oligonucleotide primers were designed based on
CC   the partial amino acid sequences. The primers were used in a PCR
CC   amplification to identify cDNA encoding PCPB from a human liver cDNA
CC   library. The PCR product was capable of encoding the first 37 amino
CC   acids of PCPB; a 46mer probe was used to obtain the full-length
CC   sequence which, although disclosed in the specification, is not
CC   claimed. PCPB inhibits the enzymatic conversion by tPA of
CC   plasminogen to plasmin in the presence of fibrinogen.

PT   Lung cancer associated gene sequences, referred to as lung cancer
PT   antigens, useful for treatment, prevention, and diagnosis of disorders
PT   such as lung cancer -
XX
PS   Claim 1; Page 507; 1425pp; English.
XX
CC   Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC   associated proteins represented in AAB58106 - AAB58548. Lung cancer
CC   associated proteins and polynucleotide sequences, their agonists, and
CC   antagonists may have neuroprotective; cytostatic; cardioactive;
CC   immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC   general; nephrotropic; antiinfective; gynecological; or antibacterial
CC   activity. The invention also includes antibodies specific for the
```

```
CC   protein or polynucleotide sequences. The lung cancer associated
CC   polynucleotide sequences may be used for detection of lung cancer,
CC   chromosome identification, as chromosome markers, and for numerous other
CC   diagnostic or research purposes. The proteins may be used to treat
CC   disorders such as neural, immune, muscular, reproductive,
CC   gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
CC   disorders. The proteins may also be used in the treatment of wounds and
CC   infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and
CC   peptide AAB58549 are used in the course of the invention for the
CC   identification and characterisation of the polynucleotide and protein
CC   sequences.

PT   New nucleic acid associated with lactation, and muscle and fat
PT   deposition, useful for genome mapping, gene identification and
PT   analysis, cattle breeding, or for genetically improving cattle  -
XX
PS   Claim 2; SEQ ID No 14595; 245pp; English.
XX
CC   The invention relates to a purified nucleic acid molecule associated with
CC   lactation or muscle and fat deposition (designated LMFD), derived
CC   from cattle, and the LMFD nucleic acid can specifically hybridise to a
CC   second nucleic acid molecule comprising any of 15112 nucleotide
CC   sequences, appearing as ABX34836-ABX49947, or complements of them.
CC   Also included are; (1) a transformed cell having a nucleic acid
CC   comprising an LMFD nucleic acid linked to a promoter and a 3' non-
CC   translated sequence that functions in the cell to cause termination of
CC   transcription and addition of polyadenylated ribonucleotides to a 3' end
CC   of the mRNA molecule; and (2) determining a level or pattern of a
CC   molecule in a bovine cell or tissue comprising: (a) incubating a marker
CC   nucleic acid (comprising any of the 15112 nucleic acid sequences or its
CC   complement or fragment) with a complementary nucleic acid molecule
CC   obtained from the bovine cell or tissue, where hybridisation between the
CC   marker nucleic acid and the complementary nucleic acid permits the
CC   detection of the molecule; and (b) detecting the level or pattern of the
CC   complementary nucleic acid, where the detection of the complementary
CC   nucleic acid is predictive of the level or pattern of the molecule.
CC   The LMFD nucleic acid is used for determining a level or pattern
CC   of a molecule in a bovine cell or tissue. It is useful for genome
CC   mapping, gene identification and analysis, cattle breeding, preparation
CC   of constructs for use in cattle gene expression, or for genetically
CC   improving cattle. The present sequence is one of the 15112 bovine
CC   LMFD EST (expressed sequence tag) nucleic acids.
CC   Note: The present sequence was not shown in the specification but
CC   was obtained in electronic format from the USPTO web site:
CC   seqdata.uspto.gov/sequence.html?DocID=20020137139.

XX
PT   New nucleic acid associated with lactation, and muscle and fat
PT   deposition, useful for genome mapping, gene identification and
PT   analysis, cattle breeding, or for genetically improving cattle  -
XX
PS   Claim 2; SEQ ID No 8425; 245pp; English.
XX
CC   The invention relates to a purified nucleic acid molecule associated with
CC   lactation or muscle and fat deposition (designated LMFD), derived
CC   from cattle, and the LMFD nucleic acid can specifically hybridise to a
CC   second nucleic acid molecule comprising any of 15112 nucleotide
CC   sequences, appearing as ABX34836-ABX49947, or complements of them.
CC   Also included are; (1) a transformed cell having a nucleic acid
CC   comprising an LMFD nucleic acid linked to a promoter and a 3' non-
CC   translated sequence that functions in the cell to cause termination of
CC   transcription and addition of polyadenylated ribonucleotides to a 3' end
CC   of the mRNA molecule; and (2) determining a level or pattern of a
CC   molecule in a bovine cell or tissue comprising: (a) incubating a marker
CC   nucleic acid (comprising any of the 15112 nucleic acid sequences or its
CC   complement or fragment) with a complementary nucleic acid molecule
CC   obtained from the bovine cell or tissue, where hybridisation between the
CC   marker nucleic acid and the complementary nucleic acid permits the
CC   detection of the molecule; and (b) detecting the level or pattern of the
CC   complementary nucleic acid, where the detection of the complementary
CC   nucleic acid is predictive of the level or pattern of the molecule.
CC   The LMFD nucleic acid is used for determining a level or pattern
CC   of a molecule in a bovine cell or tissue. It is useful for genome
CC   mapping, gene identification and analysis, cattle breeding, preparation
CC   of constructs for use in cattle gene expression, or for genetically
CC   improving cattle. The present sequence is one of the 15112 bovine
CC   LMFD EST (expressed sequence tag) nucleic acids.
CC   Note: The present sequence was not shown in the specification but
CC   was obtained in electronic format from the USPTO web site:
CC   seqdata.uspto.gov/sequence.html?DocID=20020137139.

XX
CC   The present invention describes substantially purified human proteins
CC   (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1
CC   in the specification). ABN15762 to ABN27252 encode the human ORFX
CC   proteins given in ABP00010 to ABP11500. ORFX proteins are useful for
CC   treating or preventing a pathology associated with an ORFX-associated
CC   disorder in humans, and in the manufacture of a medicament for treating a
CC   syndrome associated with ORFX-associated disorder. ORFX polynucleotide
CC   sequences can be used in gene therapy. ORFX sequences can be used in the
CC   treatment of cancer, hyperproliferative disorders, cirrhosis of liver,
CC   psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,
CC   osteoarthritis, neurodegenerative disorders, disorders related to organ
CC   transplantation, cardiovascular diseases, diabetes mellitus, systemic
CC   lupus erythematosus, hypertension, hypothyroidism, cholesterol ester
CC   storage disease, various immune deficiencies and disorders, infectious
CC   diseases, autoimmune disorders such as multiple sclerosis, rheumatoid
CC   arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host
CC   disease and autoimmune inflammatory eye disease. ORFX proteins are also
CC   useful for treating burns, incisions, ulcers, for treating osteoporosis,
CC   bone degenerative disorders, or periodontal disease, and for gut
CC   protection or regeneration and treatment of lung or liver fibrosis,
CC   reperfusion injury in various tissues and conditions resulting from
CC   systemic cytokine damage.
CC   N.B.  The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   Predicting toxic effects of compounds or the progression of these toxic
PT   effects by determining the changes in gene expression in tissues or
PT   cells exposed to the toxin and comparing these to gene expression in
PT   unexposed tissues or cells -
XX
PS   Claim 1; Seq ID No 468; 239pp; English.
XX
CC   The invention relates to methods for predicting toxic effects of
CC   compounds or the progression of these toxic effects by determining the
CC   global changes in gene expression in tissues or cells exposed to the
CC   toxin and comparing these to gene expression in unexposed tissues or
CC   cells. Also included are methods of predicting at least one toxic
CC   effect of a compound or progression of a toxic effect, preferably the
CC   hepatotoxicity of a compound, comprising detecting the level of
CC   expression in a tissue or cell sample exposed to the compound of two or
CC   more genes listed in the specification, where  differential expression of
CC   the genes is indicative of at least one toxic effect or progression.
CC   The method can also be used to identify an agent which modulates the
CC   toxic response and predict cellular pathways that a compound modulates
CC   in a cell. The methods utilise a set of at least two probes (on a solid
CC   support in kit form), where each of the probes comprises a sequence that
CC   specifically hybridises to a gene listed in the specification, a computer
CC   system comprising a database containing information identifying the
CC   expression level in a tissue or cell sample exposed to a hepatotoxin of a
CC   set of genes comprising at least two genes listed in the specification,
CC   and a user interface to view the information used to present information
CC   identifying the expression level in a tissue or cell of at least one gene
CC   listed in the specification. The method is useful for elucidating global
CC   changes in gene expression and for identifying toxicity markers in
CC   tissues or cell exposed to a known toxin. The genes may be used as
CC   toxicity markers in drug screening and toxicity assays. The genes and
CC   gene expression information may be used as diagnostic markers for the
CC   prediction or identification of the physiological state of tissue or cell
CC   sample that has been exposed to a compound or agent. Hepatotoxicity
CC   is characterised by centrilobular necrosis and steatosis. The present
CC   sequence is an expressed sequence tag (EST) or cDNA derived from a gene
CC   which is differentially expressed in response to a hepatotoxic agent.

PT   Purified active recombinant carboxypeptidase B prodn. - by
PT   expressing DNA encoding the pro-enzyme, folding and enzymatic
PT   cleavage to give active form, used e.g. for insulin prodn.
XX
PS   Example 1; Page 37-38; 49pp; English.
XX
CC   A cDNA sequence (AAT35760) codes for the mature form (AAW00602) of
CC   rat carboxypeptidase B (CPB).  A full-length sequence including
CC   cDNA (AAT35759) coding for the activation peptide (AAW00601) can
CC   be obtd. by PCR amplification (see also AAT35756 and AAT35758) of cDNA
CC   derived from Sprague-Dawley rat pancreas.  Pro-CPB can be expressed
CC   in host cells, e.g. Escherichia coli, and subsequently recovered,
CC   refolded and cleaved with trypsin to yield the active enzyme.  CPB
CC   produced this way is cheaper than porcine pancreatic enzyme, and is
CC   free of other proteases.

PT DNA encoding porcine carboxy:peptidase B - used for transforming
PT host cells, partic. Pichia species, for prodn. of the enzyme
XX
PS Claim 1; Page 20; 34pp; English.
XX
CC The porcine carboxypeptidase B coding sequence can be place in a
CC bacterial or pref. Pichia yeast expression vector. The expression
CC vector further comprises the signal peptide of either human serum
CC albumin (designated pLGD23 - NRRL B-21029); premating factor alpha
CC (designated pFJ489 - NRRL B-21028); mating factor alpha (designated
CC pFJ474 - NRRL B-21032) or the porcine proCBB signal peptide,
CC (designated pLGD27 - NRRL B-21027). The method can be used for
CC producing large amounts of porcine carboxypeptidase B and when
CC produced in Pichia yeast, the protein does not need solubilisation
CC or folding. The produced enzyme is then used for pref. cleaving
CC basic residues from the carboxy terminus of proteins.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) BD Biosciences Clontech, 1020 East Meadow
            Circle, Palo Alto, CA 94303, USA
COMMENT     This CDS clone is a part of a collection of human full length
            expression clones generated by BD Biosciences Clontech and the
            Harvard Institute of Proteomics. Each CDS has been cloned in two
            forms: with and without stop-codon (to allow fusion with C-terminal
            tag). The CDS has been directionally cloned using BD In-Fusion(TM)
            cloning system between the SalI and HindIII sites of the pDNR-DUAL
            vector. Additional sequences in the clone: 'ACC' after SalI site
            and before 'ATG' to provide Kozak consensus sequence; 'GG' after
            last codon and before HindIII site to maintain reading frame.
            Clone distribution: http://bioinfo.clontech.com/orfclones.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) BD Biosciences Clontech, 1020 East Meadow
            Circle, Palo Alto, CA 94303, USA
COMMENT     This CDS clone is a part of a collection of human full length
            expression clones generated by BD Biosciences Clontech and the
            Harvard Institute of Proteomics. Each CDS has been cloned in two
            forms: with and without stop-codon (to allow fusion with C-terminal
            tag). The CDS has been  directionally cloned using BD In-Fusion(TM)
            cloning system between the SalI  and HindIII sites of the pDNR-DUAL
            vector. Additional sequences in the clone:  'ACC' after SalI site
            and before 'ATG' to provide Kozak consensus sequence; 'GG' after
            last codon and before HindIII site to maintain reading frame.
            Clone distribution: http://bioinfo.clontech.com/orfclones.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX
PT   Human brain carboxypeptidase B isolated from the hippocampus useful for
PT   screening agents for the treatment of Alzheimer's and other brain
PT   disorders -
XX
PS   Claim 1; Page 68-71; 84pp; Japanese.
XX
CC   This invention describes a novel protein with peptidase activity
CC   against brain beta-amyloid precursor protein which has been isolated from
CC   human hippocampus and which has cerebroprotective, antialzheimers,
CC   nootropic, neuroprotective and hemostatic activity and which can be used
CC   as a vaccine or for gene therapy. The protein, and compounds identified
CC   by screening as promoters or inhibitors of its activity, are used to
CC   regulate beta-amyloid accumulation in the brain and treat or prevent
CC   diseases in which this occurs, such as Alzheimer's, senile dementia,
CC   inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   New isolated human protease proteins, useful for developing therapeutic
PT   or diagnostic compositions, particularly for developing human
PT   therapeutic agents that modulate protease activity in cells or tissues
PT   -
XX
PS   Claim 1; Page -; 80pp; English.
XX
CC   The invention discloses an isolated human protease peptide, its allelic
CC   variant or orthologue. The proper functioning of the cell requires
CC   careful control of the levels of important structural proteins, enzymes
CC   and regulatory proteins. One of the ways the cell reduces the steady
CC   state level of a particular protein is by proteolytic degradation.
CC   Proteolysis can also be used to convert a pre or pro-protein in to an
CC   active form. Proteases also regulate many different cell proliferation,
CC   differentiation and signalling processes. The peptides and nucleic acid
CC   molecules are useful in the development of human therapeutics (gene and
CC   protein therapy) and diagnostic compositions. The peptides are also
CC   useful for raising antibodies or eliciting an immune response (vaccine),
CC   as a reagent (including the labeled reagent) in assays designed to
CC   quantitatively determine levels of the protein (or its binding partner or
CC   ligand) in biological fluids, or as markers for tissues in which the
CC   corresponding protein is preferentially expressed and in methods for
CC   identifying a modulator of the peptide or an agent that binds to the
CC   peptide. The agents identified are useful for treating protease-related
CC   conditions that are specific for the subfamily of proteases that the
CC   peptide belongs to, particularly in cells and tissues that express the
CC   protease, such as inflammation, cancer, arteriosclerosis and degenerative
CC   disorders. The modulator of the peptide is also useful for treating a
CC   disorder characterised by an absence of, inappropriate or unwanted
CC   expression of the protein. The sequence presented is the human protease
CC   protein, variant #2, the gene for which is located on chromosome 13.
CC   Note: This sequence is not shown in the specification but has been
CC   created by the indexer from information given in figure 3.

PT   Antibody to human plasma carboxy:peptidase B - useful for detecting
PT   and purifying hPCPB for use in treating clotting disorders e.g.
PT   haemophilia A
XX
PS   Disclosure; Figure 4; 40pp; English.
XX
CC   An antibody which specifically binds human plasma carboxypeptidase B
CC   (hPCPB) and does not cross react with other carboxypeptidases is
CC   useful for the detection of hPCPB in vitro.  The antibody is also
CC   used for purifying hPCPB from a sample.  Purification comprises
CC   passing a sample thought to contain hPCPB over either a column to
CC   which antibody has been bound, or a plasminogen affinity column,
CC   eluting the column and then recovering the fraction containing the
CC   hPCPB.

PT   Using human plasma carboxy:peptidase B in blood coagulation - is
PT   functionally related to carboxy:peptidase A and pancreas
PT   carboxy:peptidase B
XX
PS   Example 2; Column 37-42; 39pp; English.
XX
CC   This sequence represents human plasma carboxypeptidase B (PCPB) which
CC   has a molecular weight under non-reducing SDS-PAGE of approx. 60 kD.
CC   PCPB may be used therapeutically in haemostatic regulation.  PCPB is
CC   purified from human plasma or by transformed cell culture by
CC   extraction using plasminogen bound to a solid phase.
CC   (Updated on 25-MAR-2003 to correct PF field.)

PT   Detecting new polymorphism of human plasma carboxypeptidase B -
PT   comprises Alanine or Threonine at position 147 of protein by DNA or
PT   protein analysis, useful to detect risk of thrombotic disease in
PT   humans
XX
PS   Disclosure; Page 25-26; 35pp; English.
XX
CC   This sequence is the human plasma carboxypeptidase B (PCPB) mutant
CC   hPCPBthr147. The invention relates to a method for determining the
CC   presence of DNA or protein polymorphisms of PCPB in human subjects, which
CC   comprises obtaining a prepared tissue or blood sample and determining the
CC   presence of DNA coding for naturally occurring polymorphs of the protein
CC   containing Alanine or Threonine at position 147 (PCPB1 and PCPB2
CC   respectively). Determination of the relative distribution of the PCPB
CC   polymorphs in a patient's blood by genetic or protein analysis by the
CC   methods is useful to determine the risk of thrombotic disease in humans.
CC   Such assessments may be made by accumulating information concerning the
CC   relative distribution of the different polymorphs within the general
CC   population compared with populations known to be at risk and establishing
CC   a PCPB polymorph profile for at-risk patients.

PT   New human plasma carboxypeptidase B - used as haemostatic
PT   regulator for clotting blood, partic. for treating blood clotting
PT   disorders, e.g. haemophilia
XX
PS   Claim 2; Fig 4; 40pp; English.
XX
CC   This amino acid sequence was deduced from a clone isolated from a
CC   human liver cDNA library. There is about 40% sequence identity
CC   between the deduced preproPCPB amino acid sequence and pro-human
CC   mast cell carboxypeptidase A and between preproPCPB and prepro-rat
CC   carboxypeptidase B. Human PCPB has the same substrate binding sites
CC   as, and shares 6 cysteine residues which form 3 intramolecular
CC   disulphide bonds with, bovine and rat carboxypeptidase B. The
CC   presence of the same amino acid (Asp at position 348 of the mature
CC   protein) at the region in carboxypeptidases that determines
CC   substrate specificity, suggests that PCPB represents a plasma-
CC   derived carboxypeptidase. PCPB inhibits the enzymatic conversion by
CC   tPA of plasminogen to plasmin in the presence of fibrinogen.

PT   Human brain carboxypeptidase B isolated from the hippocampus useful for
PT   screening agents for the treatment of Alzheimer's and other brain
PT   disorders -
XX
PS   Disclosure; Page 71-73; 84pp; Japanese.
XX
CC   This invention describes a novel protein with peptidase activity
CC   against brain beta-amyloid precursor protein which has been isolated from
CC   human hippocampus and which has cerebroprotective, antialzheimers,
CC   nootropic, neuroprotective and hemostatic activity and which can be used
CC   as a vaccine or for gene therapy. The protein, and compounds identified
CC   by screening as promoters or inhibitors of its activity, are used to
CC   regulate beta-amyloid accumulation in the brain and treat or prevent
CC   diseases in which this occurs, such as Alzheimer's, senile dementia,
CC   inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   Human brain carboxypeptidase B isolated from the hippocampus useful for
PT   screening agents for the treatment of Alzheimer's and other brain
PT   disorders -
XX
PS   Disclosure; Page 74-75; 84pp; Japanese.
XX
CC   This invention describes a novel protein with peptidase activity
CC   against brain beta-amyloid precursor protein which has been isolated from
CC   human hippocampus and which has cerebroprotective, antialzheimers,
CC   nootropic, neuroprotective and hemostatic activity and which can be used
CC   as a vaccine or for gene therapy. The protein, and compounds identified
CC   by screening as promoters or inhibitors of its activity, are used to
CC   regulate beta-amyloid accumulation in the brain and treat or prevent
CC   diseases in which this occurs, such as Alzheimer's, senile dementia,
CC   inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   Lung cancer associated gene sequences, referred to as lung cancer
PT   antigens, useful for treatment, prevention, and diagnosis of disorders
PT   such as lung cancer -
XX
PS   Claim 11; Page 944-945; 1425pp; English.
XX
CC   Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC   associated proteins represented in AAB58106 - AAB58548. Lung cancer
CC   associated proteins and polynucleotide sequences, their agonists, and
CC   antagonists may have neuroprotective; cytostatic; cardioactive;
CC   immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC   general; nephrotropic; antiinfective; gynecological; or antibacterial
CC   activity. The invention also includes antibodies specific for the
CC   protein or polynucleotide sequences. The lung cancer associated
CC   polynucleotide sequences may be used for detection of lung cancer,
CC   chromosome identification, as chromosome markers, and for numerous other
CC   diagnostic or research purposes. The proteins may be used to treat
CC   disorders such as neural, immune, muscular, reproductive,
CC   gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
CC   disorders. The proteins may also be used in the treatment of wounds and
CC   infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and
CC   peptide AAB58549 are used in the course of the invention for the
CC   identification and characterisation of the polynucleotide and protein
CC   sequences.

PT   New polynucleotide encoding a zinc carboxypeptidase B-like protein
PT   polypeptide, useful for treating diseases associated with
PT   carboxypeptidase dysfunction, e.g. cancer, CNS disorder, COPD or
PT   haematological disorder  -
XX
PS   Disclosure; Fig 3; 113pp; English.
XX
CC   The present sequence represents a zinc carboxypeptidase B precursor.
CC   The specification describes a human zinc carboxypeptidase B-like
CC   protein. The zinc carboxypeptidase B-like protein is used for treating
CC   diseases, such as cancer, a CNS disorder, chronic obstructive pulmonary
CC   disease (COPD) or haematological disorders. The zinc carboxypeptidase
CC   B-like protein may also be used to identify compounds which may act
CC   as activators or inhibitors at the enzyme's active site, to raise
CC   specific antibodies which can block the enzyme and effectively reduce
CC   its activity, as a bait protein in a two-hybrid or three-hybrid assay
CC   to identify other proteins which bind to or interact with the human
CC   zinc carboxypeptidase-like protein polypeptide and modulate its
CC   activity, and for immunization of mammals.

PT   DNA encoding porcine carboxy:peptidase B - used for transforming
PT   host cells, partic. Pichia species, for prodn. of the enzyme
XX
PS   Example 1; Page 16-17; 34pp; English.
XX
CC   The porcine carboxypeptidase B coding sequence can be place in a
CC   bacterial or pref. Pichia yeast expression vector. The expression
CC   vector further comprises the signal peptide of either human serum
CC   albumin (designated pLGD23 - NRRL B-21029); premating factor alpha
CC   (designated pFJ489 - NRRL B-21028); mating factor alpha (designated
CC   pFJ474 - NRRL B-21032) or the porcine proCBB signal peptide,
CC   (designated pLGD27 - NRRL B-21027).  The method can be used for
CC   producing large amounts of porcine carboxypeptidase B and when
CC   produced in Pichia yeast, the protein does not need solubilisation
CC   or folding.  The produced enzyme is then used for pref. cleaving
CC   basic residues from the carboxy terminus of proteins.

PT   Two component system for anti-tumour therapy - comprising targeting
PT   moiety linked to mutated enzyme which can transform an
PT   anti:neoplastic prodrug
XX
PS   Reference Example 14; Page 131-132; 182pp; English.
XX
CC   A two-component system for anti-tumour therapy comprises a targeting
CC   moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC   prodrug. The system is based on antibody directed enzyme prodrug therapy
CC   (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC   pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC   Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC   be used. The present sequence is that of the native prepro-HCPB.

PT New modified pro-domain of carboxy-peptidase B - enhances expression
PT of co-expressed proteins for production of recombinant
PT carboxy-peptidase or its fusions with antibodies, used, e.g. in
PT enzyme prodrug therapy
XX
PS Example 1; Page 54-55; 83pp; English.
XX
CC The human pancreatic carboxypeptidase B (CPB) can be co-expressed with a
CC modified pro-domain of CPB on a separate gene to enhance recombinant
CC expression. This process can be used to produce recombinant CPB in
CC eukaryotic cells, or fusions of CPB with antibody chains. CPB is used in
CC insulin production and protein sequencing, while its fusions with
CC antibodies are useful in antibody-directed enzyme prodrug therapy. The
CC modified pro-domain provide increased yields of recombinant CPB, possibly
CC by protecting the C-terminus against enzymatic degradation or by
CC increasing intracellular trafficking.
